PROFILE

I support enterprise applications and operational workflows at McMaster University. My work combines troubleshooting, access and permissions, user support, documentation and stakeholder communication. Independent projects extend that experience into practical software.

PROFESSIONAL EXPERIENCE

IT Analyst - McMaster University, Hospitality Services

February 2026 - Present

Support enterprise applications and operational workflows; investigate issues with users, stakeholders and vendors. Work through access and permissions, user support and technical documentation. Systems include Jira Service Management, Dynamics 365 ESM, OneCard / TouchNet and Microsoft 365.

IT Technical Assistant - McMaster University, UTS

January 2025 - January 2026

Supported users with Windows and macOS, software, connectivity and account access. Documented investigations and worked with other support teams when issues required escalation.

SELECTED INDEPENDENT & ACADEMIC WORK

Online Technical Help: Remote-support service website with separate request flows, a browser interface and Node validation. AI-assisted development; public launch and provider configuration pending.

Aurora Weather: React Native / Expo learning project connecting Open-Meteo geocoding to hourly forecasts, with loading and error states.

Media Library: C# / .NET Framework coursework exploring abstract classes, interfaces, title search and text-file input.

CAPABILITIES & FOUNDATIONS

Application support | Incident triage | Access and permissions | Windows / macOS | Documentation | User and stakeholder communication | HTML / CSS / JavaScript | Node.js | React Native | C#
